

# Brandt Davis

Full-stack Software Engineer | Large B2B and B2C globally scalable applications  
(315) 516-2588 | brandtdavis26@gmail.com | [github.com/Brandt459](https://github.com/Brandt459) | [brandtdavis.dev](https://brandtdavis.dev)

## TECHNICAL SKILLS

### Languages:

Python  
JavaScript  
HTML  
CSS  
Java  
SQL

### Frameworks:

Flask  
React  
Svelte  
Next JS  
Django  
React Native

### Databases:

PostgreSQL  
MySQL  
MongoDB  
Google Firestore

### Other:

Docker  
REST APIs  
Git  
Linux  
Bash  
Data Visualization  
Data Analysis

## WORK EXPERIENCE

### Software Developer

April 2023 – Present

Army Cyber Institute (Contracted through BluePath Solutions)

- Fine-tuned Llama 2 Large Language Model (LLM), enhancing its performance for decision support in cyber defense operations
- Developed a full-stack web application using JavaScript, React, Python, Flask, PostgreSQL, and Docker for social media data visualization, demonstrating proficiency in REST architecture
- Collaborate effectively within a 4-member team to create prototype platforms for data management and artificial intelligence security testing, contributing to both front-end and back-end development
- Actively participate in weekly meetings with the team for requirements gathering and design discussions, ensuring project alignment with objectives
- Ensure top-notch code quality by proactively refactoring code, organizing the codebase, and implementing maintainable solutions
- Played a pivotal role in securing a significant amount of money in funding for the organization
- Provide guidance and mentorship to an intern, facilitating their meaningful contributions to development tasks

### Software Developer

August 2021 - September 2021

Bar Dash

- Conceptualized, designed, and developed a mobile application prototype using the React Native framework
- Integrated Google Firestore as the database for the project, resulting in data availability rates of over 99.99%
- Created a seamless user login and registration experience with multi-factor authentication for added security

## PROJECTS

### Car Budget Predictor

November 2022

[Full Description](#) | [GitHub](#)

- Developed a highly accurate linear regression model using Scikit-learn, achieving 99% accuracy by analyzing a dataset of 500 rows
- Conducted in-depth analyses of correlations among various customer attributes, including age, annual salary, and net worth, and their respective provided car budgets
- Leveraged Python libraries, such as Matplotlib and Seaborn, to create visually compelling data visualizations, facilitating easy comprehension of key insights
- Demonstrated the ability to apply advanced data analysis and machine learning techniques effectively to solve real-world problems

### Delivery Route Algorithm

September 2022

[Full Description](#) | [GitHub](#)

- Implemented an efficient greedy algorithm in Python to determine the optimal delivery route from a pool of 27 locations, prioritizing proximity and minimizing transportation costs
- Enhanced the algorithm's capabilities by integrating multiple package constraints, including delivery deadlines and truck capacity
- Achieved a 22% reduction in route distance by optimizing delivery scheduling through package consolidation

## EDUCATION

### Bachelor of Science, Computer Science

(Graduated) November 2022

Western Governors University | Salt Lake City, UT
